Tooth-Colored Restorations

Silver and gold fillings used to be your only choices for fillings, especially for back teeth. Today, silver fillings can be replaced with tooth-colored fillings for a much more natural look.

One of the new strong synthetic resins or porcelain is used as the filling material. Since these materials are bonded to the teeth, they are very strong and durable.

Silver fillings can really darken a smile. Replacing them with tooth-colored fillings will make a dramatic difference! The new resin fillings are nearly invisible; they restore teeth to their original, natural beauty and help you look your best.
